

Around you

COMPANY PROFILE

Lafer technology is always around you

Electrical cabinets for energy distribution, industrial automation and rack systems: Lafer products can be found everywhere as they are chosen everyday by customers operating in a wide range of sectors.

Advanced, tailor-made and customized solutions, our products are perfectly able to satisfy the exigences voiced by installers, customers and end users, while representing the perfect blend between flexibility and innovation.

 **LAFER**
Around you

Lafer technology is always around you.

You just need to open your eyes to see it.

On a cruise ship. In a big city skyscraper. In the nearest hospital and maybe, in an industrial complex located very close to you.

Both in Italy and abroad, Lafer is synonymous with quality and extreme functionality. It is thanks to these values that Lafer products can easily fit different needs: those of the private and public sector, those of tourism and those of the automotive, food, transport, chemical and oil industries as well.

Since if there is Lafer, it means that things go right.

Lafer technology is always around you.

You need certain numbers to make it real.

The numbers of a big company.

Lafer manufactures all products inhouse in a 12.000 sq. m. structure that hosts all phases of processing.

To manage at best more than 50 orders per day, a perfect organization is required.

To achieve this goal, Lafer avails itself of an highly automated production which ensures both the coordination of different departments and the possibility of having everything under control.

Only in this way it is possible to answer quickly and efficiently to any requirement.

Lafer. Since 1979, professionals at your side.

The best of Lafer in 12.000 sq. m.

Most of the success gained by Lafer is the result of the optimisation of its production processes. Each department is highly automatized, equipped with cutting-edge technologies and latest generation machine tools. The usage of digitally controlled systems and integrated orders management allow Lafer to monitor the status of the processing in every moment: from order placement to final delivery.

375.000 kWh produced per year

Power. An extremely significant element in Lafer universe. Not only for the connection with the sector where we operate but also for the value that we have been able to attribute to the concept of "clean energy".

With 375.000 kWh produced per year, the photovoltaic panels installed on the roof of our factory are more than enough to reach the enviable goal of energy self-reliance.

FRACCARO

TruMatic 7000

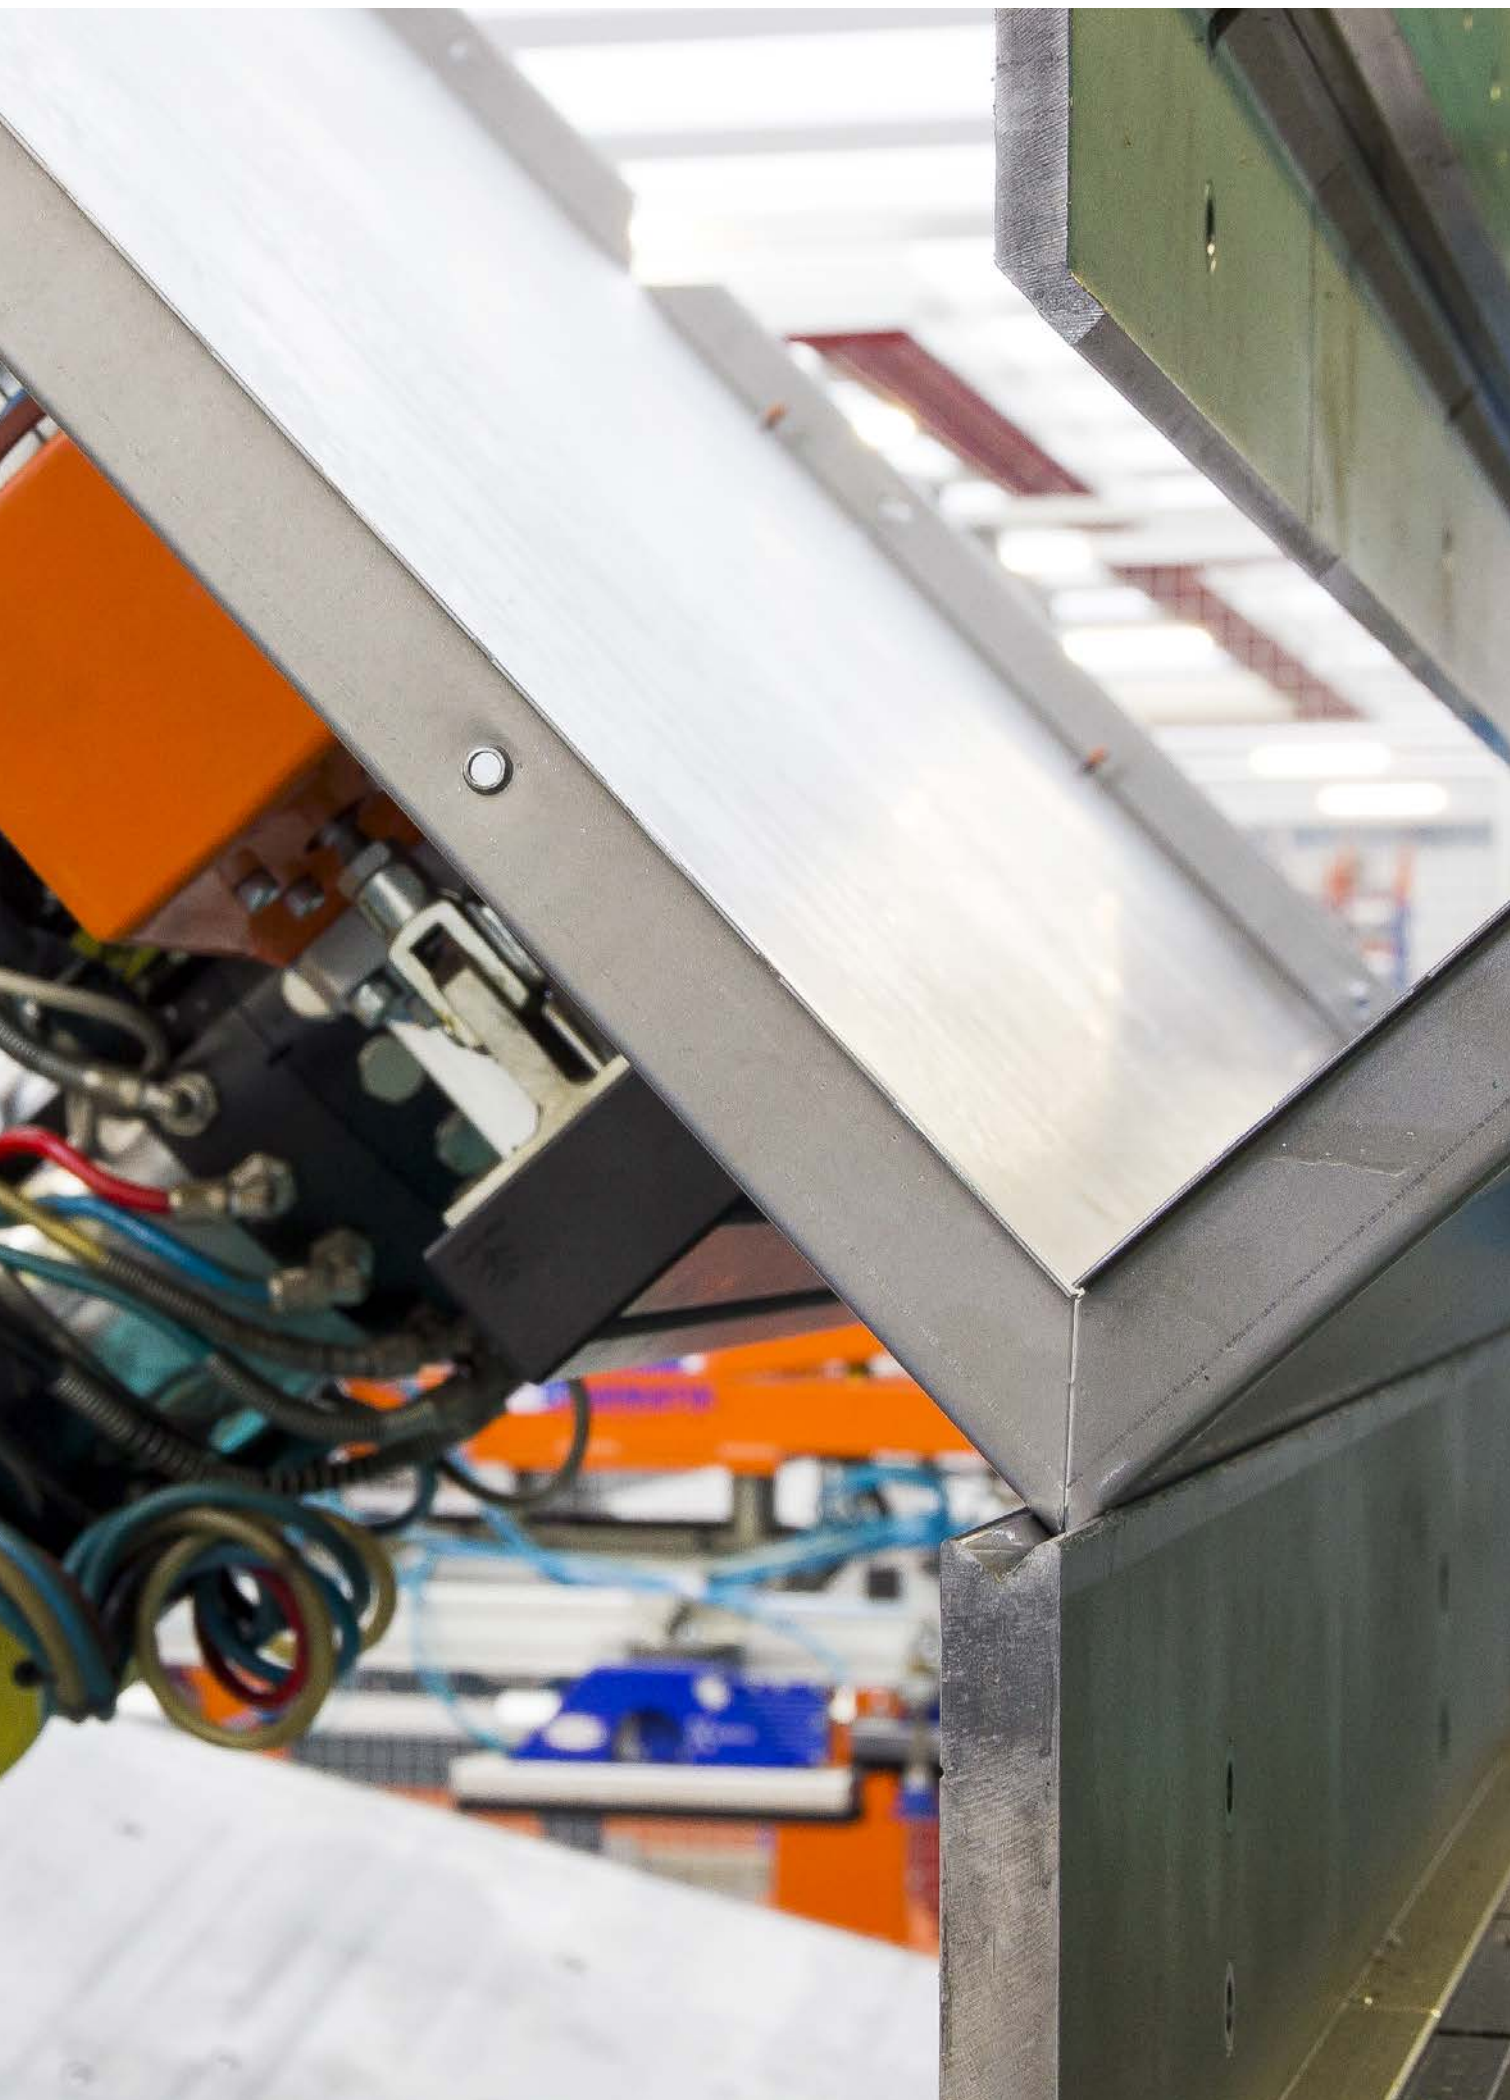

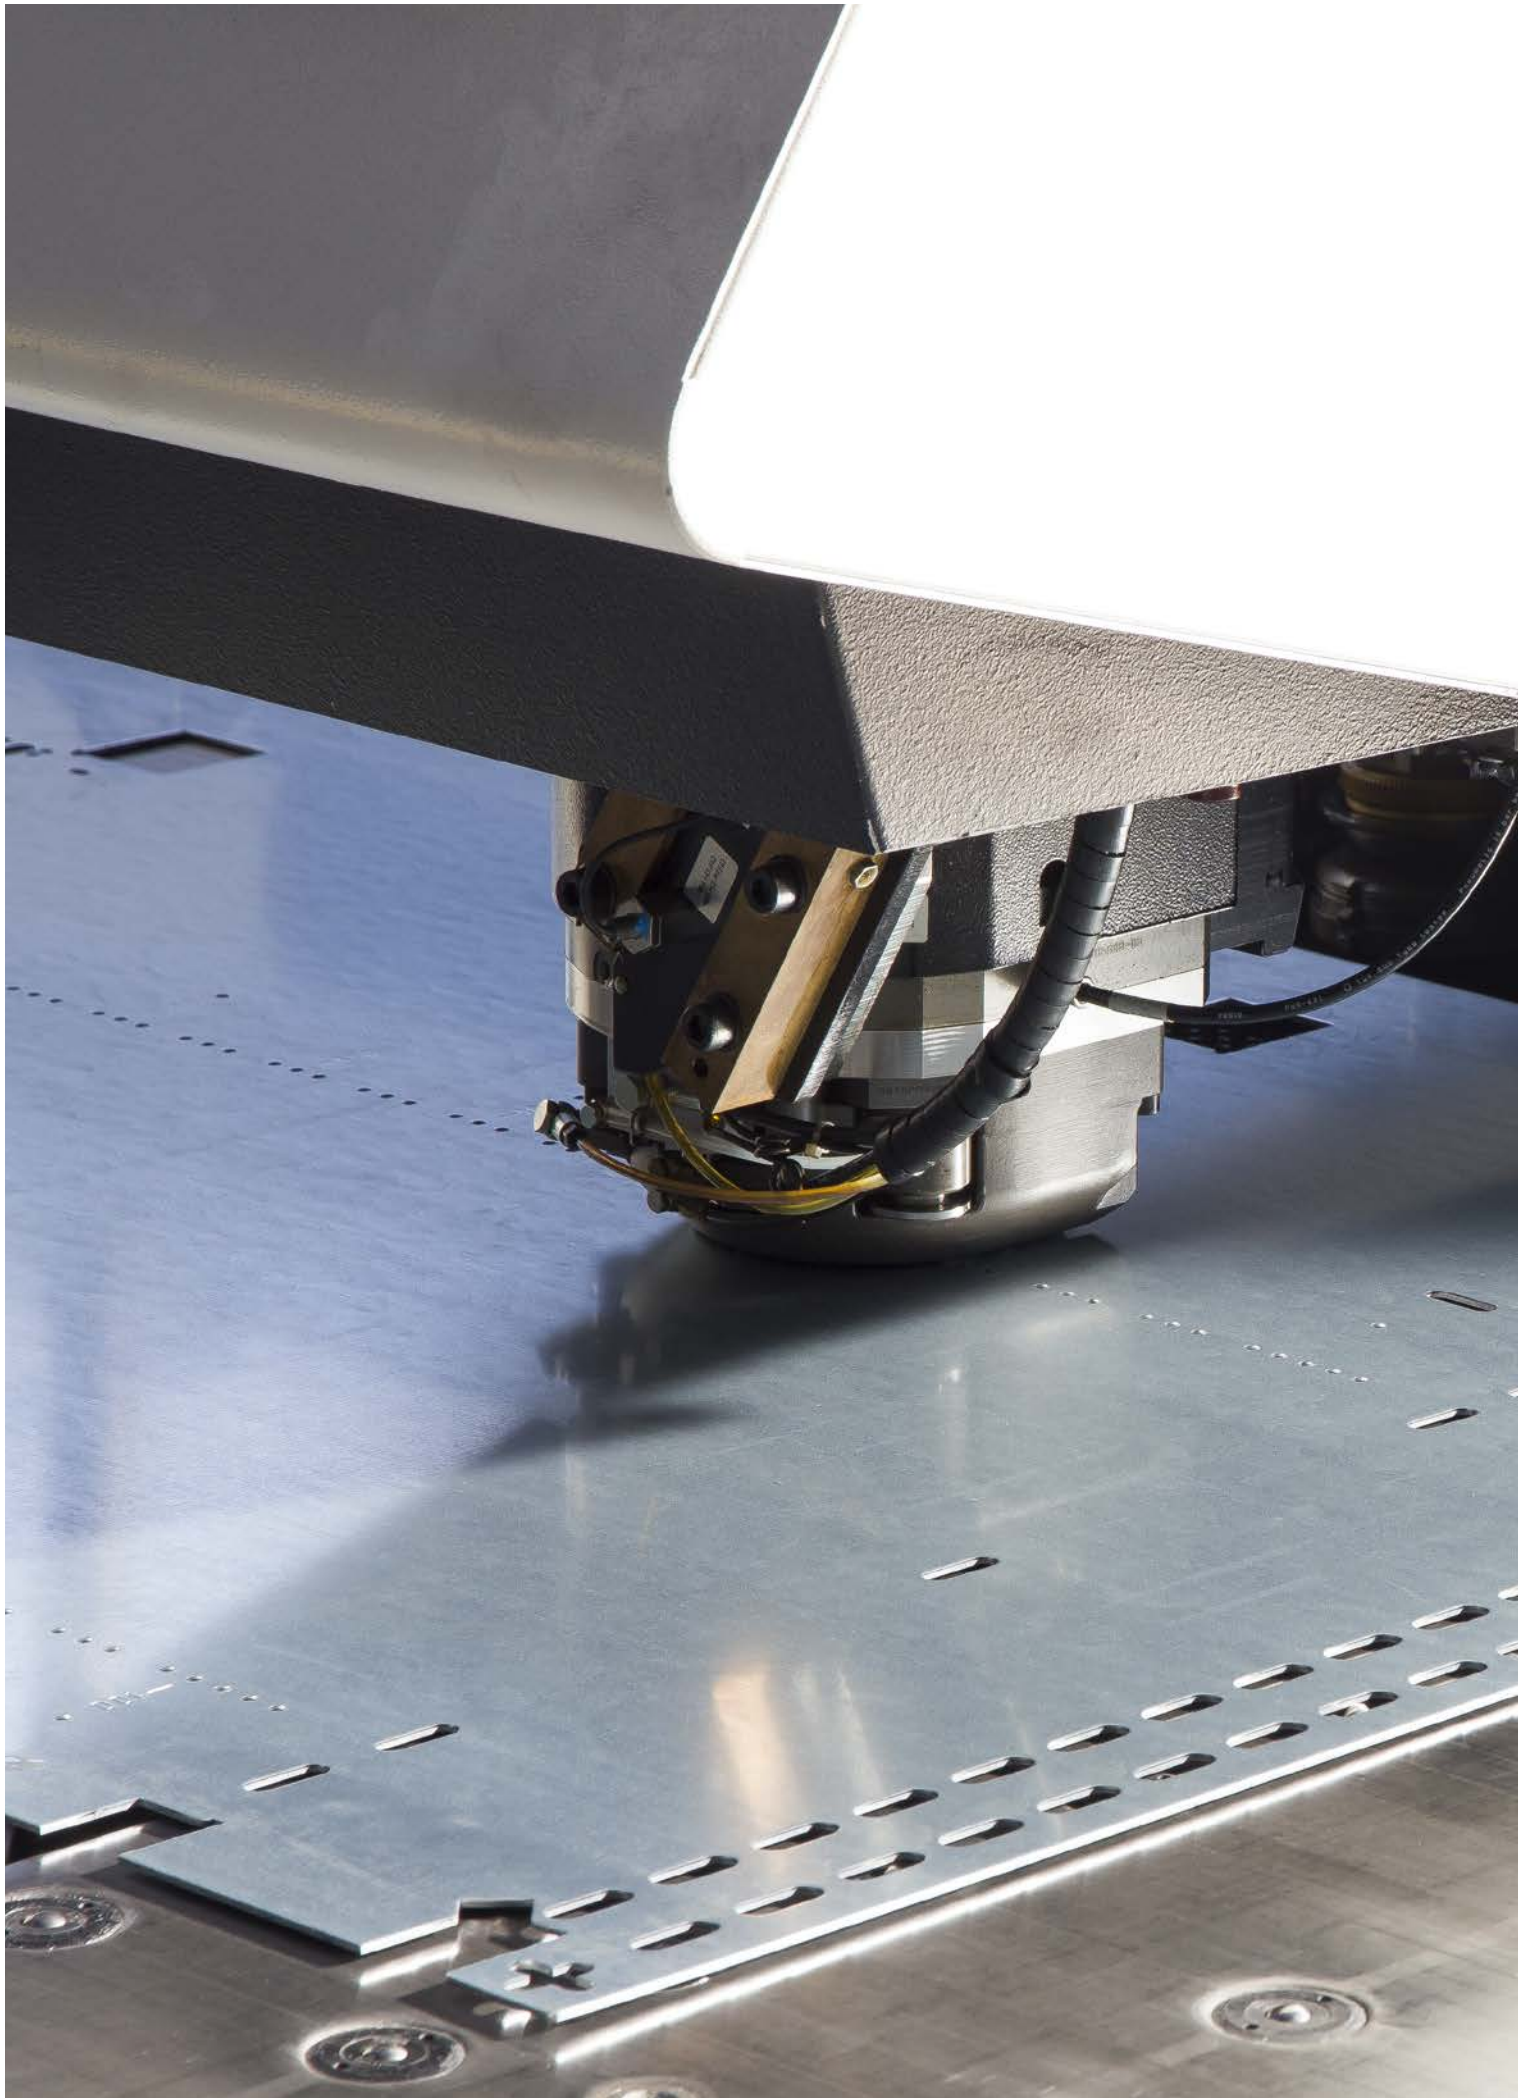

Lafer technology is always around you.

You need the proper tools to put it into practice.

Lafer only makes use of advanced and highly evolved technologies. This is required by our production system that makes flexibility the starting point of every project. Robotic lines and computerized systems allow us to work quickly and efficiently, without undermining manufacturing reliability. Since the result is and has always to be a quality product. A 100% Lafer product.

Robotic lines of the latest generation: the whole production is under control.

Once reached the production stage, every project is assigned to the department in charge embarking on a path that will turn it into a product ready for final delivery.

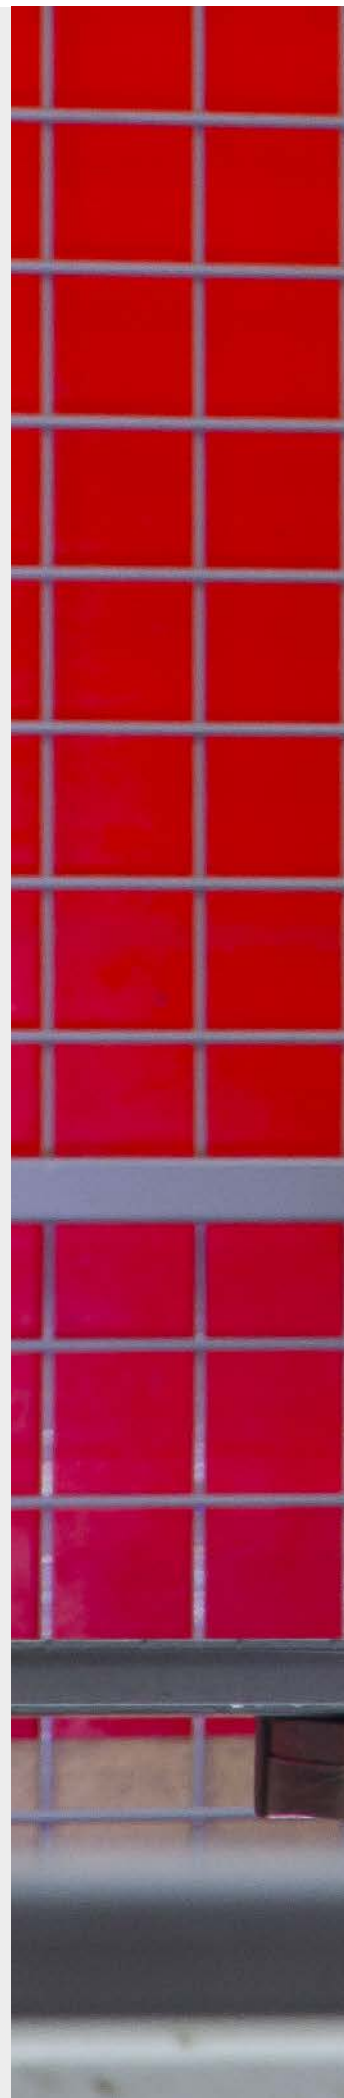

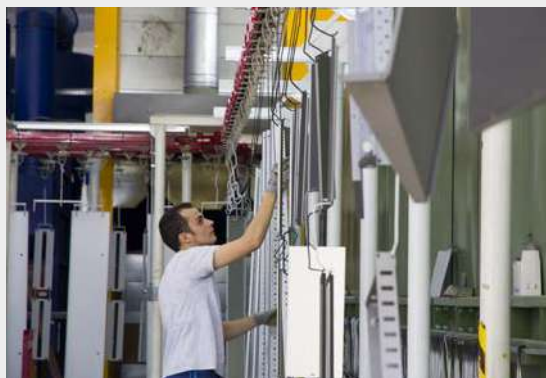

Our fully devoted work cycles, specifically conceived to optimise times and allow a quick sequence between the different stages, are completely automatized or only require the support of a single operator.

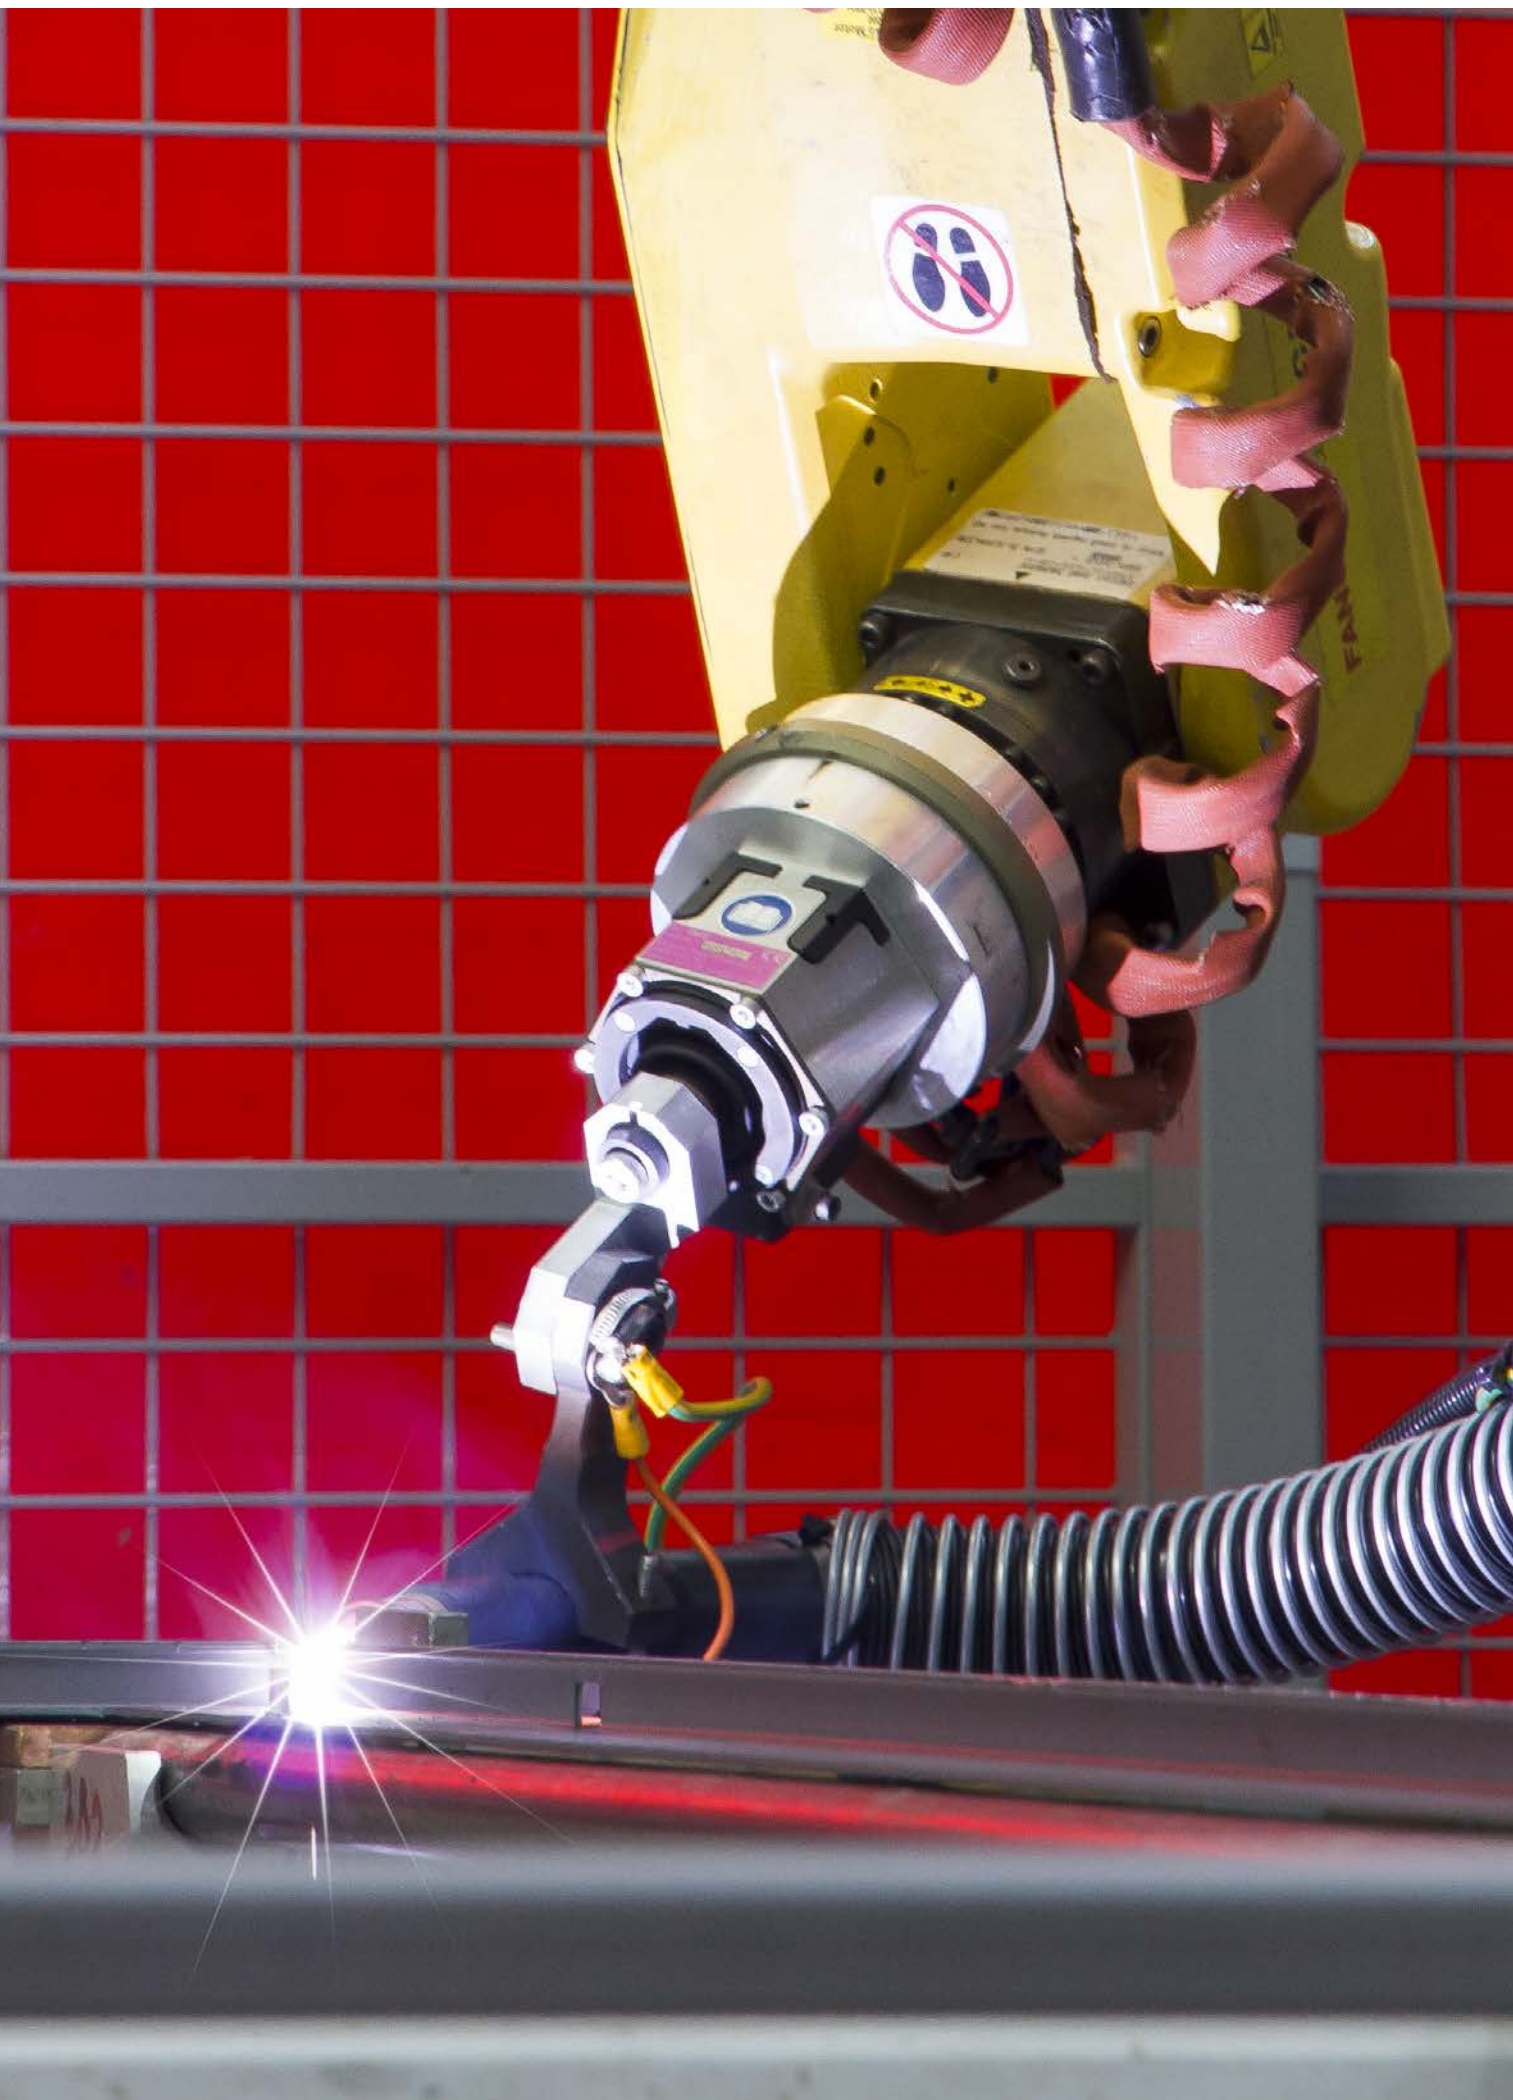

Lafer punching, bending and powder coating robotic machines combine with the reliance on qualified personnel for welding and assembly steps, for all complementary activities to those carried out by machines and for any other planning and monitoring activity.

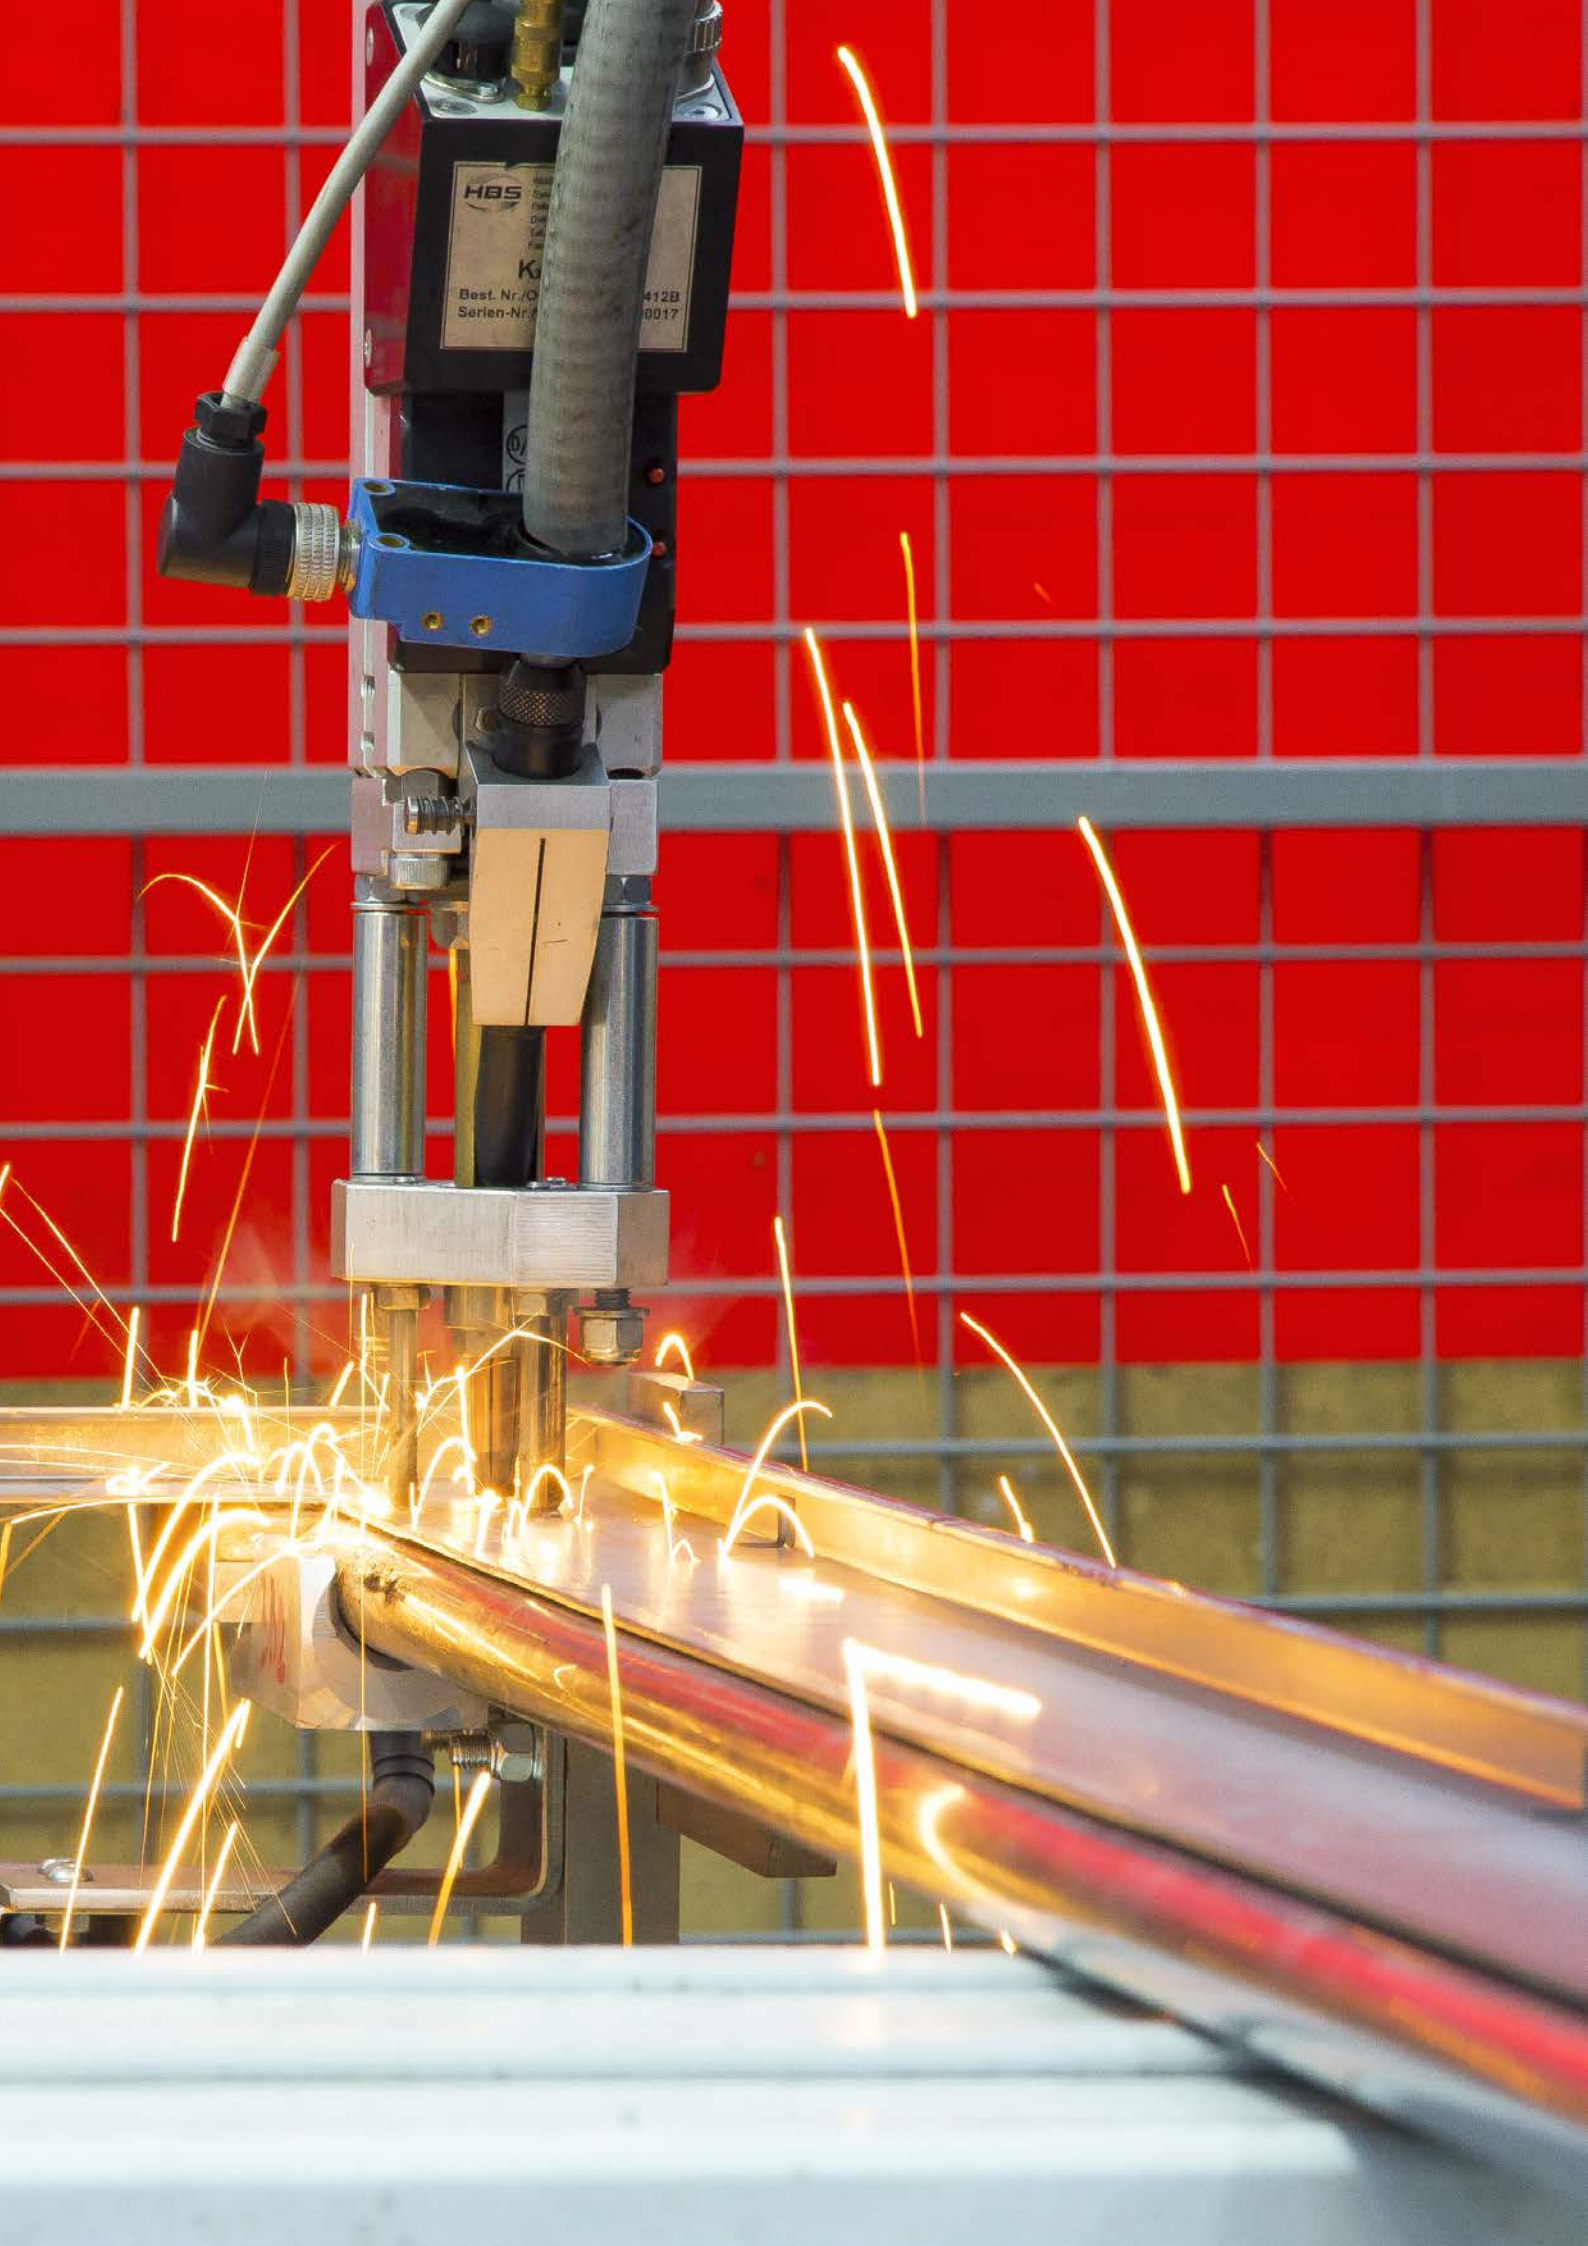

Cutting-edge systems. Our secret is flexibility.

Lafer is a company naturally able to innovate and look ahead, this is the reason why it has always been investing on its manufacturing plants under the conviction that the key to service is customization, even of internal processes. The technical collaboration with the main processing plants manufacturers has led Lafer to get involved in the design of tailor-made machine tools, the use of which, has considerably increased the flexibility of our production.

Lafer technology is always around you.

You need
the right people
to implement it.

Technical and design offices, sales and administrative departments, specialised operators.

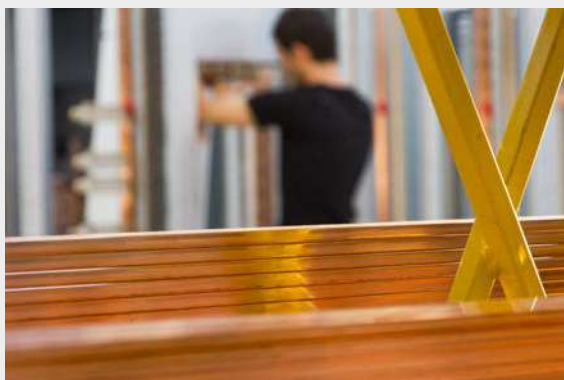

For Lafer its staff is really precious: an important resource not only from a strictly practical point of view.

The development of a new project always involves the whole working group under the conviction that the best ideas are the shared ones and that anyone can put his or her experience at the company's disposal to improve the company itself, its products and the services it offers.

Lafer staff always has a leading role.

In each department, Lafer avails itself of the collaboration of specialized staff, experienced operators, technicians and professionals of the sector, daily committed to achieve a single aim: ensuring the quality of the finished product, respecting project specifications and times required.

Lafer technology is always around you.

FAST-ONE™
The first universal configurator
for electrical cabinets

You need ambition
and great commitment
to make it possible.

FAST-ONE.

The first universal configurator for electrical cabinets.

Fast-One is the very first one universal, multibrand configurator for electrical cabinets. An idea that the company has developed to make the designers, panel builders and installers' job simpler.

Thanks to FAST-ONE and to its user-friendly interface, projecting electrical cabinets has never been easier. The development of the software, on the basis of the company experience, has allowed Lafer to create an indispensable tool for everyday work.

Automatic correction of errors

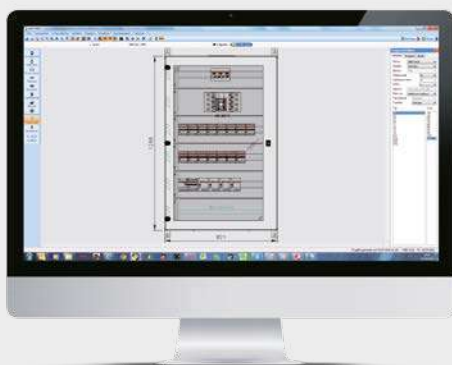

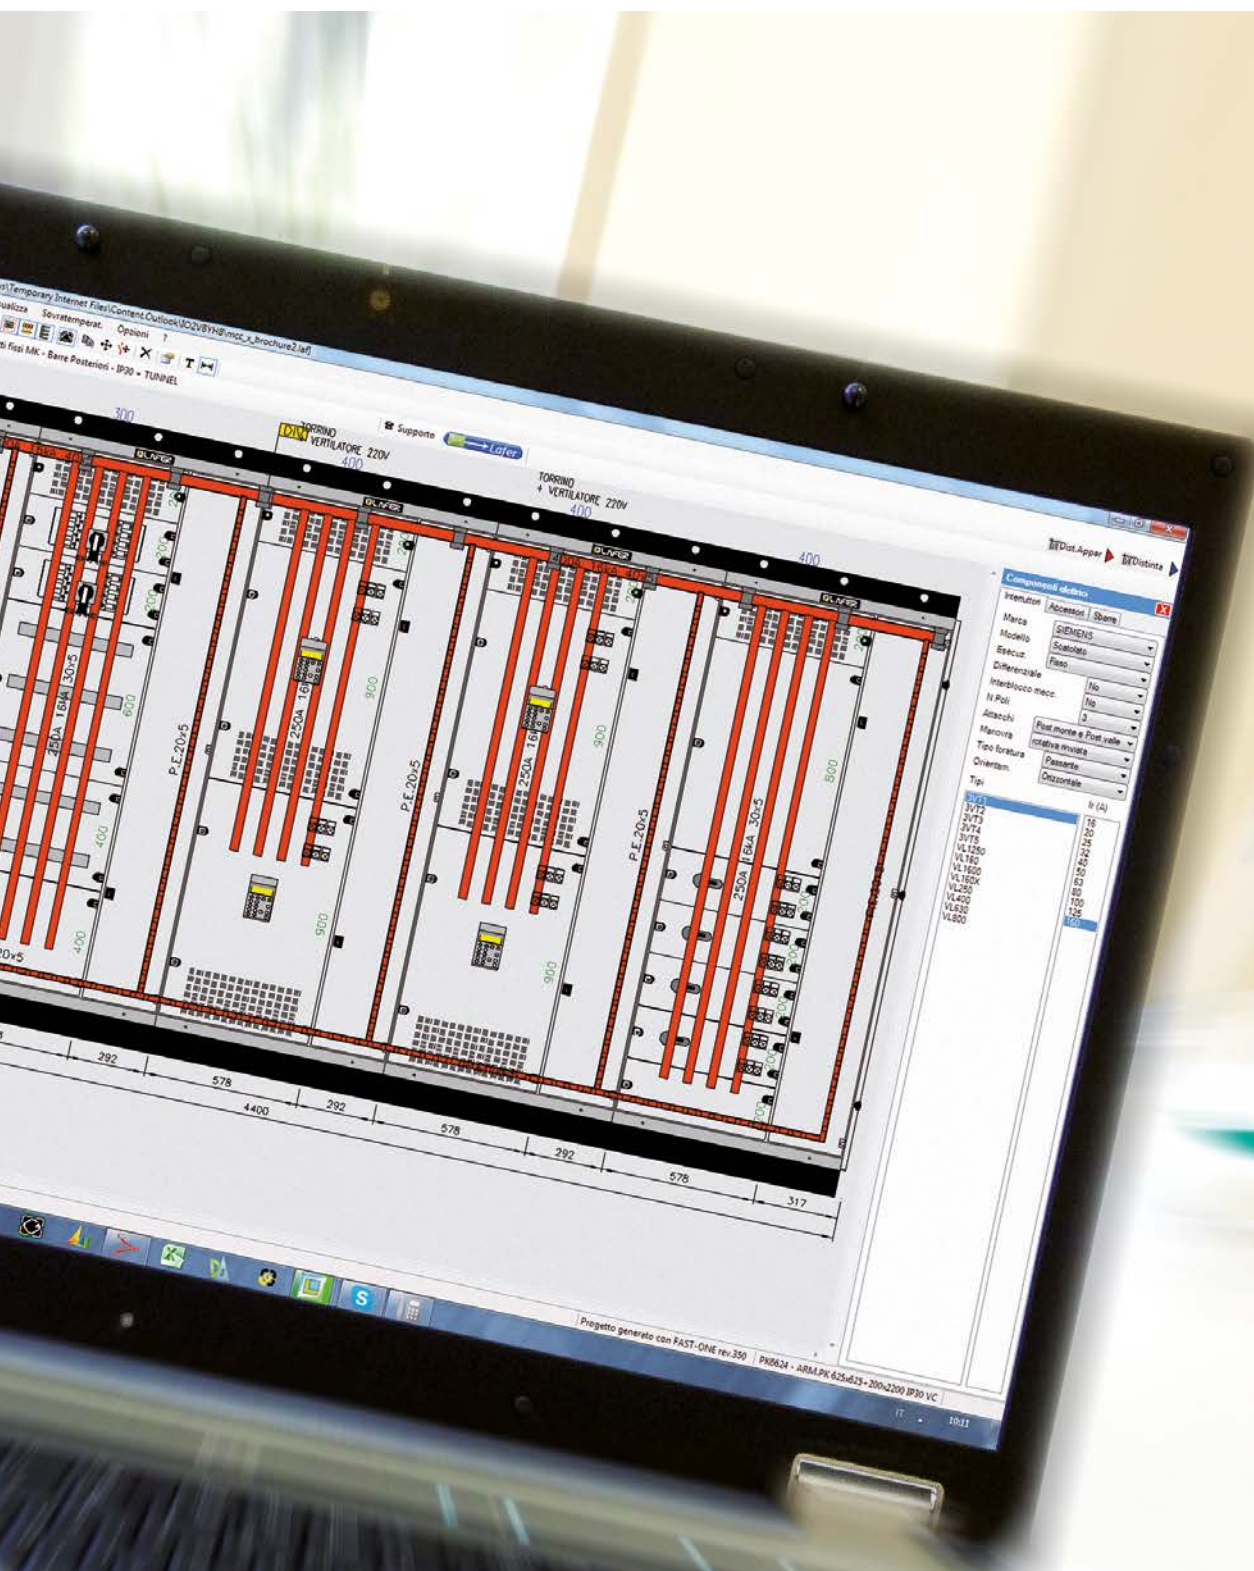

Imagine the cabinet, with Fast-One you realize it

Quick, intuitive and advanced.
Imagine the cabinet,
with FAST-ONE you realize it.

Lafer FAST-ONE is a continuously evolving software package which offers several advantages: it fastens the production stage, it enhances the checks and automatically eliminates mistakes; it optimizes costs and times and makes the designing phase easier; it offers maximum flexibility in the choice of materials simplifying the manufacturing, assembly and installation steps. Not to mention the direct interface with Lafer that allows to engage in a continuous exchange of information during every phase of the project.

www.fast-one.it

Lafer technology is always around you.

You need the right words to tell about it.

Lafer does not lose sight of quality even when dealing with online contents.

Its multilanguage website is a modern, user-friendly and intuitive tool rich in contents: products and accessories, technical specifications and useful information for installers and designers, links for free download of the configurator FAST-ONE, contact forms to request assistance or contact the company.

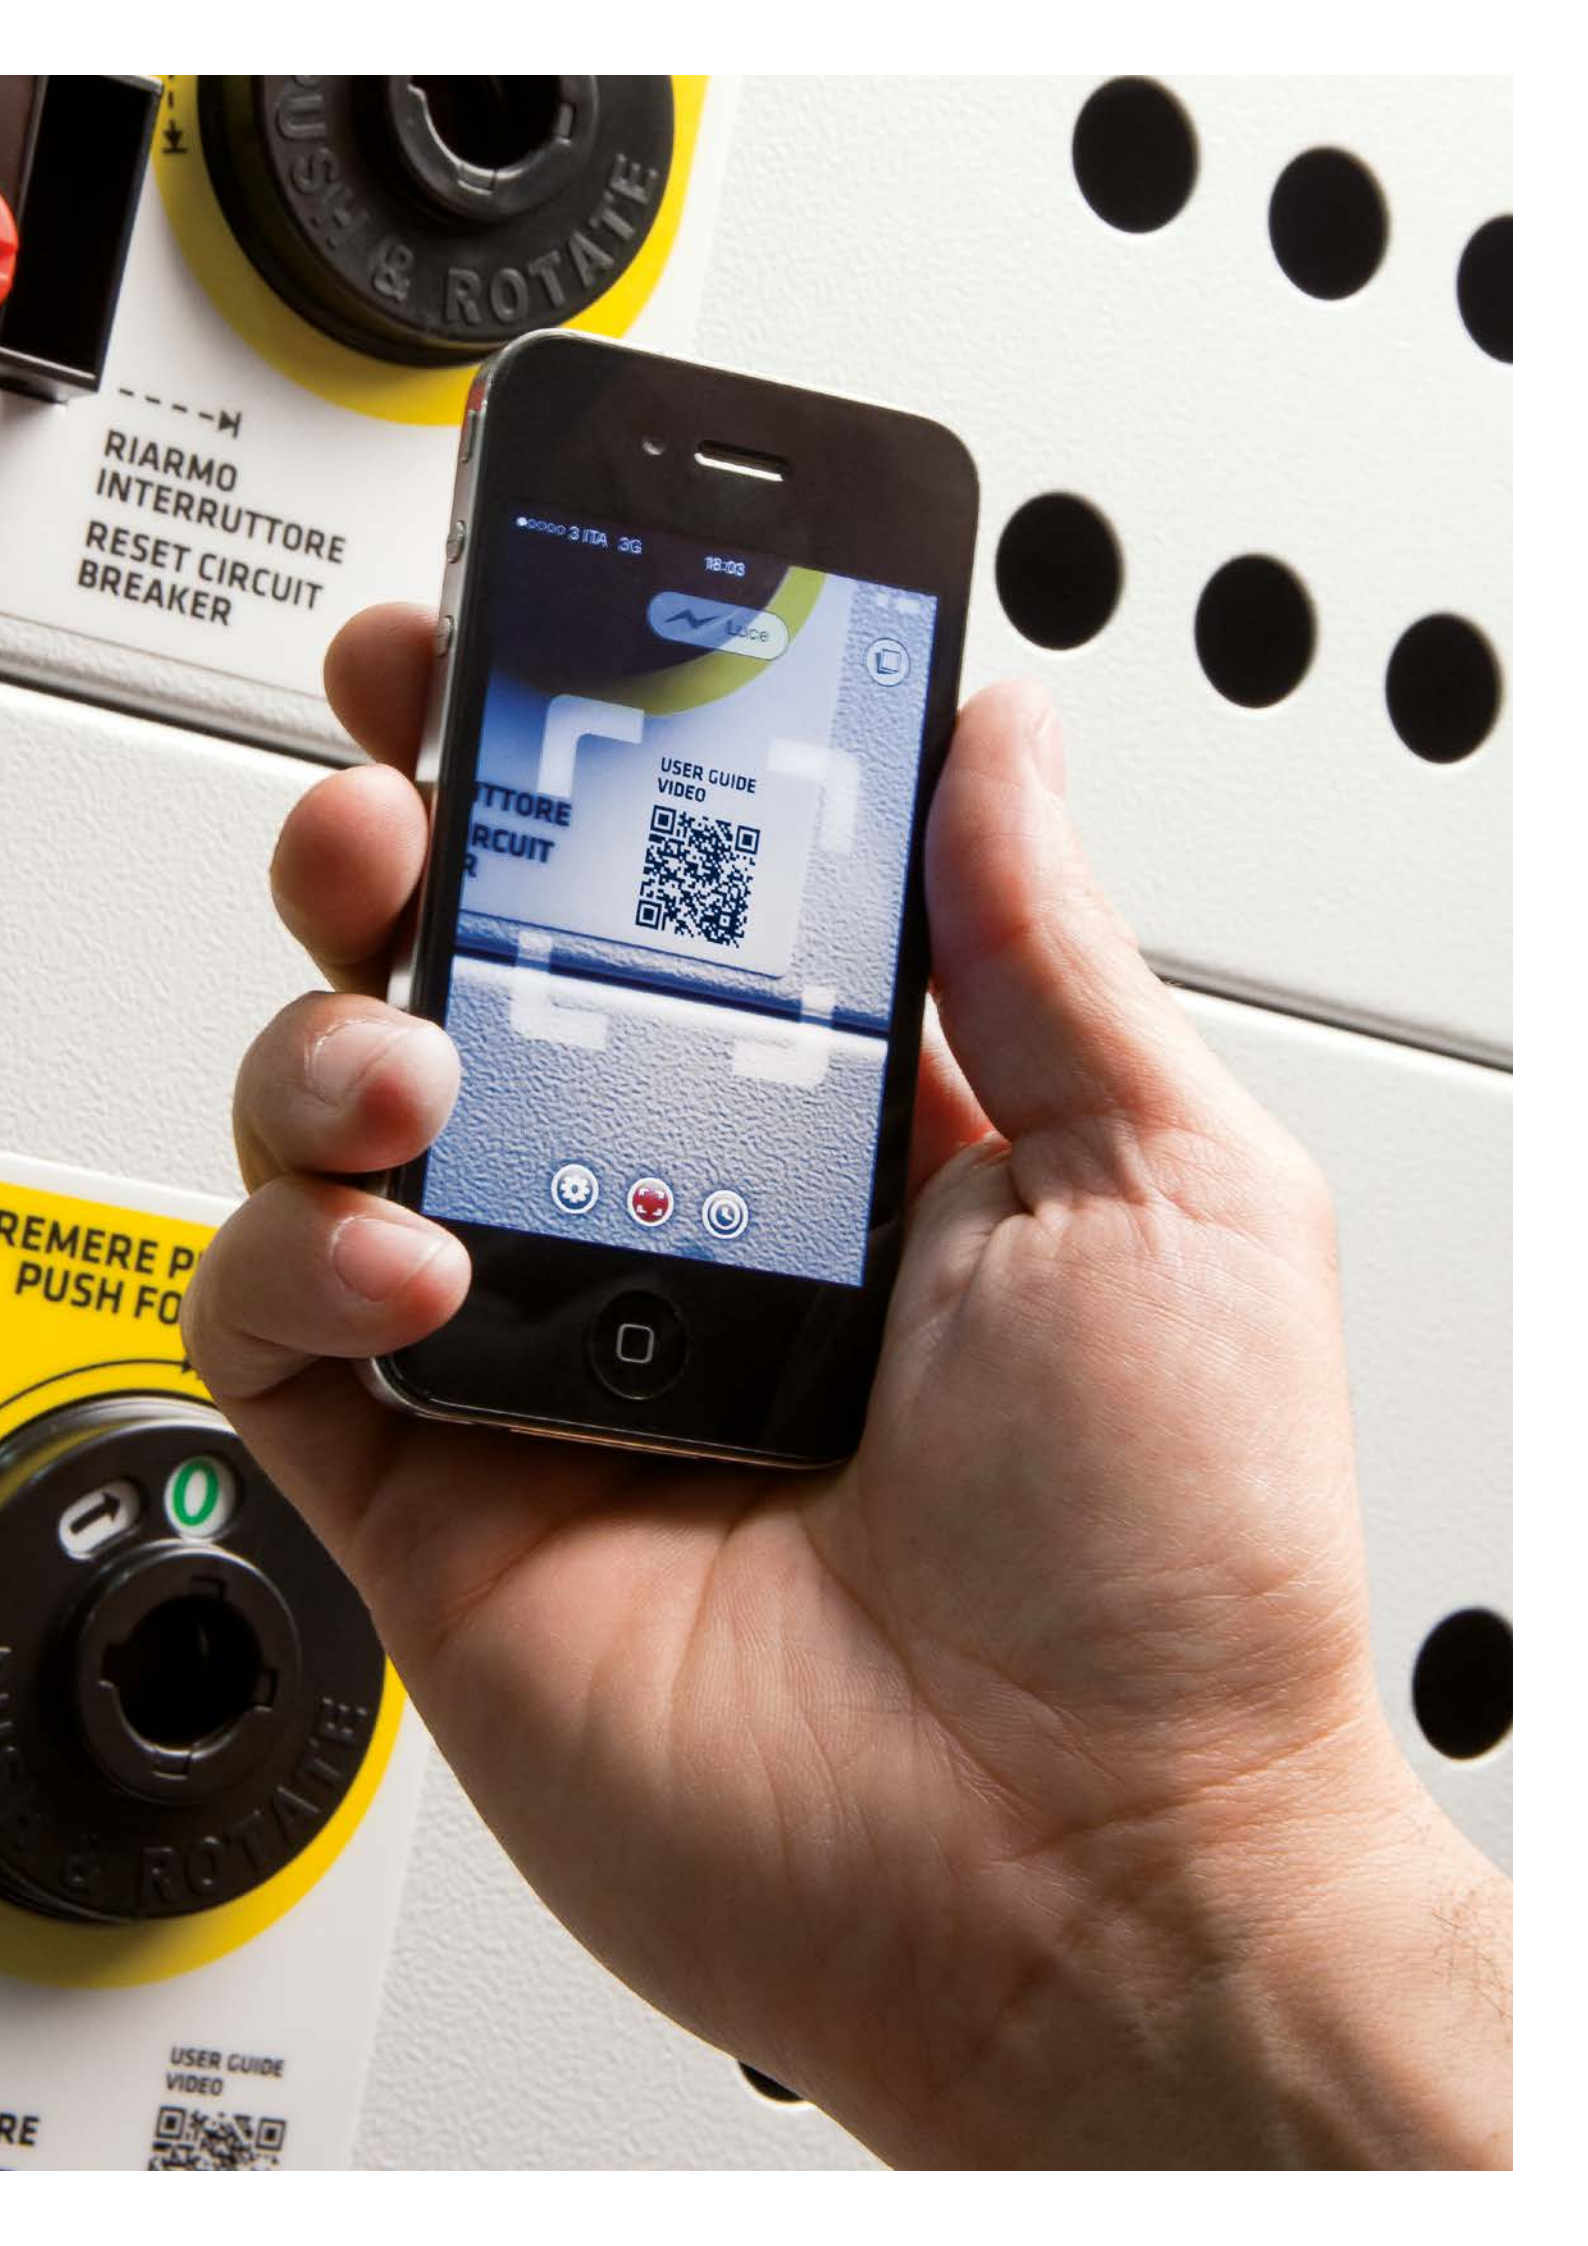

Moreover videos, social networks, newsletters and many other interesting news. Lafer website is a really indispensable resource for customers, partners and suppliers.

Every instruction manual and technical catalogue include specific QR codes offering an instant access to updated technical mounting videos and demonstrations.

To complete the picture, a complete series of catalogues describing the whole Lafer product range is available.
